Since the backend is communicated using http, modern browsers don't allow content to be loaded and lock it. Therefore, the only way to see the backend is through Chrome, since it allows http content to be served, by following the steps below.

1. Go to the app URL: https://khainl1110.github.io/BitcoinPrediction/
2. On the left side of the bar, click on the Site Information icon, then choose Site Settings

3. It will pop up a new window, scrolls down, Choose Allow for Insecure Content\

☑	Protected content IDs Chrome Live Caption might not work	Allow (default) ▾
📋	Clipboard	Ask (default) ▾
💳	Payment handlers	Allow (default) ▾
⚠	**Insecure content**	Block (default) ▾

Block (default)
Allow
Block

👤	Third-party sign-in	Allow (default) ▾
🥽	Augmented reality	Ask (default) ▾
🥽	Virtual reality	Ask (default) ▾

🔒	V8 optimizer

4. Choose the Pop up tab, go back to the page. This time it will ask to reload the page, choose Reload

← → C ⚙ khainl1110.github.io/BitcoinPrediction/

⚙ Reload this page to apply your updated settings on this site **Reload**

5. The new setting should be applied and Chrome will allow the backend to serve content. Proceed to use the website
